TURNKEY SOLUTIONS

FOR SOLAR GRID TIE ROOFTOP SYSTEM

SOLAR GRID TIE ROOFTOP SYSTEMS

A Grid Tie Solar Rooftop System is a Photovoltaic (PV) system that has its electricity generating modules (Solar Photovoltaic Modules) mounted on the rooftop of a residential / commercial industrial building. The system converts the DC Power generated by Solar Photovoltaic Modules to AC power using Power Conditioning Units (PCU or Inverter).

The generated power during the day time can be utilised to run all kind of electrical appliances and excess power can be fed to grid as long as grid is available. In cases where solar power is not sufficient due to cloud cover or during night hours the captive loads are served by drawing the Power from grid. A Grid Tie Solar Rooftop System work on net metering basis wherein the beneficiary pays to utility on net meter reading basis only.
